DETAILED ACTION

Applicants' Preliminary Amendment, filed 7/23/04, has been entered. Claims 1-34 are cancelled; claims 35-64 are newly added.

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 35, 36, 39-47, 57-60, drawn to a non-human animal having a mutated LAT gene, wherein the sequence of the mutant LAT protein corresponds to a wild-type sequence and contains a single mutation of the tyrosine corresponding to Y136 in the mouse LAT protein, cells isolated from the animal, a mouse gene encoding said mutant LAT protein.

Group II, claim(s) 35, 37, 39-41, 45-47, 61, drawn to a non-human animal having a mutated LAT gene, wherein the mutated LAT gene codes for a mutant LAT protein comprising exon 7 of SEQ ID NO: 2, cells isolated from the animal, a mouse gene encoding said mutant LAT protein.

Group III, claim(s) 35, 38, 39-41, 45-47, drawn to a non-human animal having a mutated LAT gene, wherein the sequence of the mutant LAT protein contains a composite mutation of the three distal tyrosine residues, cells isolated from the animal,

Group IV, claim(s) 48-50, drawn to methods of screening for drugs for treatment of allergy, asthma, and/or disease associated with TH2 cell deregulation in vivo.

Application/Control Number: 10/502,332

Art Unit: 1632

Group V, claim(s) 51, drawn to methods of screening for drugs for treatment of allergy, asthma, and/or disease associated with TH2 cell deregulation in vitro.

Group VI, claim(s) 52, drawn to methods for screening drugs that regulate the activity of TH2 cells *in vivo*, utilizing a non-human animal comprising a mutated LAT gene.

Group VII, claim(s) 53, drawn to methods of producing a pharmaceutical composition for treating a disease associated with deregulated TH2 cell activity.

Group VIII, claim(s) 54, 55, 64, drawn to producing human IgE antibodies by providing a non-human animal expressing humanized IgE and mating it with an animal having a mutated LAT protein.

Group IX, claim(s) 56, drawn to a B cell hybridoma.

Group X, claim(s) 62, 63, drawn to diagnostic method and kit for asthma, allergy, eosinophilia and/or TH2 cells deregulation by detection of a mutated LAT gene coding for a mutant LAT protein containing a single mutation of the tyrosine Y132.

Group XI, claim(s) 62, 63, drawn to diagnostic method and kit for asthma, allergy, eosinophilia and/or TH2 cells deregulation by detection of a mutated LAT gene coding for a mutant LAT protein containing a composite mutation of three distal tyrosines Y171, Y191, and Y226.

The inventions listed as Groups I-XI do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

Unity of Invention between different categories of inventions will only be found to exist if specific combinations of inventions are present. Those combinations include:

- 1) A product and a special process of manufacture of said product
- 2) A product and a process of use of said product
- 3) A product, a special process of manufacture of said product, and a process of use of said product
- 4) A process and an apparatus specially designed to carry out said process
- 5) A product, a special process of manufacture of said product, and an apparatus specially designed to carry out said process.

Page 3

Application/Control Number: 10/502,332

Art Unit: 1632

The allowed combinations do not include multiple products, multiple methods of using said products, and methods of making multiple products as claimed in the instant invention.

37 CFR 1.475 (c) states that:

"If an application contains claims to more or less than one of the combination of categories of invention set forth in paragraph (b) of this section, unity of invention might not be present."

37 CFR 1.475 (d) states:

"If multiple products, processes of manufacture or uses are claimed, the first invention of the category first mentioned in the claims of the application and the first recited invention of each other categories related thereto will be considered as the main invention in the claims, see PCT Article 17(3)(a) and 1.476(c)."

37 CFR 1.475(e) states:

"The determination whether a group of inventions is so linked as to form a single general inventive concept shall be made without regard to whether the inventions are claimed in separate claims or as alternative within a single claim."

Groups I-XI lack the same or corresponding special technical feature, because a special technical feature is defined as one that defines a contribution over the prior art (see PCT Rule 13.2). The non-human mammal having a mutated LAT gene encoding for a mutant protein, wherein the mutant LAT protein leads to exaggerated TH2 cell differentiation fails to provide a contribution over the prior art, because mice have mutated LAT genes are known (See Sommers et al., J. Exp. Med, 194(2): 135-142 (July 16, 2001)), where they teach mice which contain a mutation of the distal four tyrosines of LAT. Furthermore, LAT is known for its essential role in T cell development (Zhang et al. (Immunity, 10:323-332, March 1999). Thus, the non-human mammal first recited in the claims does not provide a contribution over the prior art, and thus, the claims as a whole lack unity. Groups I-III and IX are directed to different products (different mice containing different mutations and a B cell hybridoma), which are not required nor recited for the implementation of the other. Note above, that multiple products are do not have the same or corresponding special technical feature, do not provide unity of

Application/Control Number: 10/502,332

Art Unit: 1632

invention. Groups IV-VIII and X-XI are directed to different methods that each have materially separate protocol and require specific consideration. Accordingly, it is determined the Groups I-XI fail to have unity of invention. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

The Examiner has required restriction between product and process claims. Where applicant elects claims directed to the product, and a product claim is subsequently found allowable, withdrawn process claims that depend from or otherwise include all the limitations of the allowable product claim will be rejoined in accordance with the provisions of MPEP § 821.04. Process claims that depend from or otherwise include all the limitations of the patentable product will be entered as a matter of right if the amendment is presented prior to final rejection or allowance, whichever is earlier. Amendments submitted after final rejection are governed by 37 CFR 1.116; amendments submitted after allowance are governed by 37 CFR 1.312.

In the event of rejoinder, the requirement for restriction between the product claims and the rejoined process claims will be withdrawn, and the rejoined process Art Unit: 1632

claims will be fully examined for patentability in accordance with 37 CFR 1.104. Thus, to be allowable, the rejoined claims must meet all criteria for patentability including the requirements of 35 U.S.C. 101, 102, 103, and 112. Until an elected product claim is found allowable, an otherwise proper restriction requirement between product claims and process claims may be maintained. Withdrawn process claims that are not commensurate in scope with an allowed product claim will not be rejoined. See "Guidance on Treatment of Product and Process Claims in light of In re Ochiai, In re Brouwer and 35 U.S.C. § 103(b)," 1184 O.G. 86 (March 26, 1996). Additionally, in order to retain the right to rejoinder in accordance with the above policy, Applicant is advised that the process claims should be amended during prosecution either to maintain dependency on the product claims or to otherwise include the limitations of the product claims. Failure to do so may result in a loss of the right to rejoinder.

Further, note that the prohibition against double patenting rejections of 35 U.S.C. 121 does not apply where the restriction requirement is withdrawn by the examiner before the patent issues. See MPEP § 804.01.

Any inquiry concerning this communication or earlier communications from the Examiner should be directed to Thaian N. Ton whose telephone number is (571) 272-0736. The Examiner can normally be reached on Monday through Thursday from 7:00 to 5:00 (Eastern Standard Time). Should the Examiner be unavailable, inquiries should be directed to Ram Shukla, SPE of Art Unit 1632, at (571) 272-0735. Papers related to this application may be submitted to Group 1600 by facsimile transmission. Papers should be faxed to Group 1600 via the Official Fax at (571) 273-8300. The faxing of such papers must conform with the notice published in the Official Gazette, 1096 OG 30 (November 15, 1989).
